LOCATION

TBD

Sustainable Futures PCS’s mission is to develop globally competent leaders by teaching the tenets of **environmental justice and ecological sustainability**, while providing a comprehensive, rigorous, and **personalized education program**. The school will serve **disconnected youth**—students who have felt like outsiders at other schools and lack connections to both school and to their communities. Sustainable Futures will utilize an **ungraded and competency-based model, blended instruction, and project-based learning** in order to meet students where they are. Through these combined practices, Sustainable Futures will prepare students for college and career and to be active, globally conscious citizens.
